

# AES Encryption Application

The User can send an Encrypted message while he can decrypt an encrypted message. So whenever the user is sending a message he should use the contact number of that person . This System makes use of AES Encryption Algorithm to encrypt and decrypt the messages.

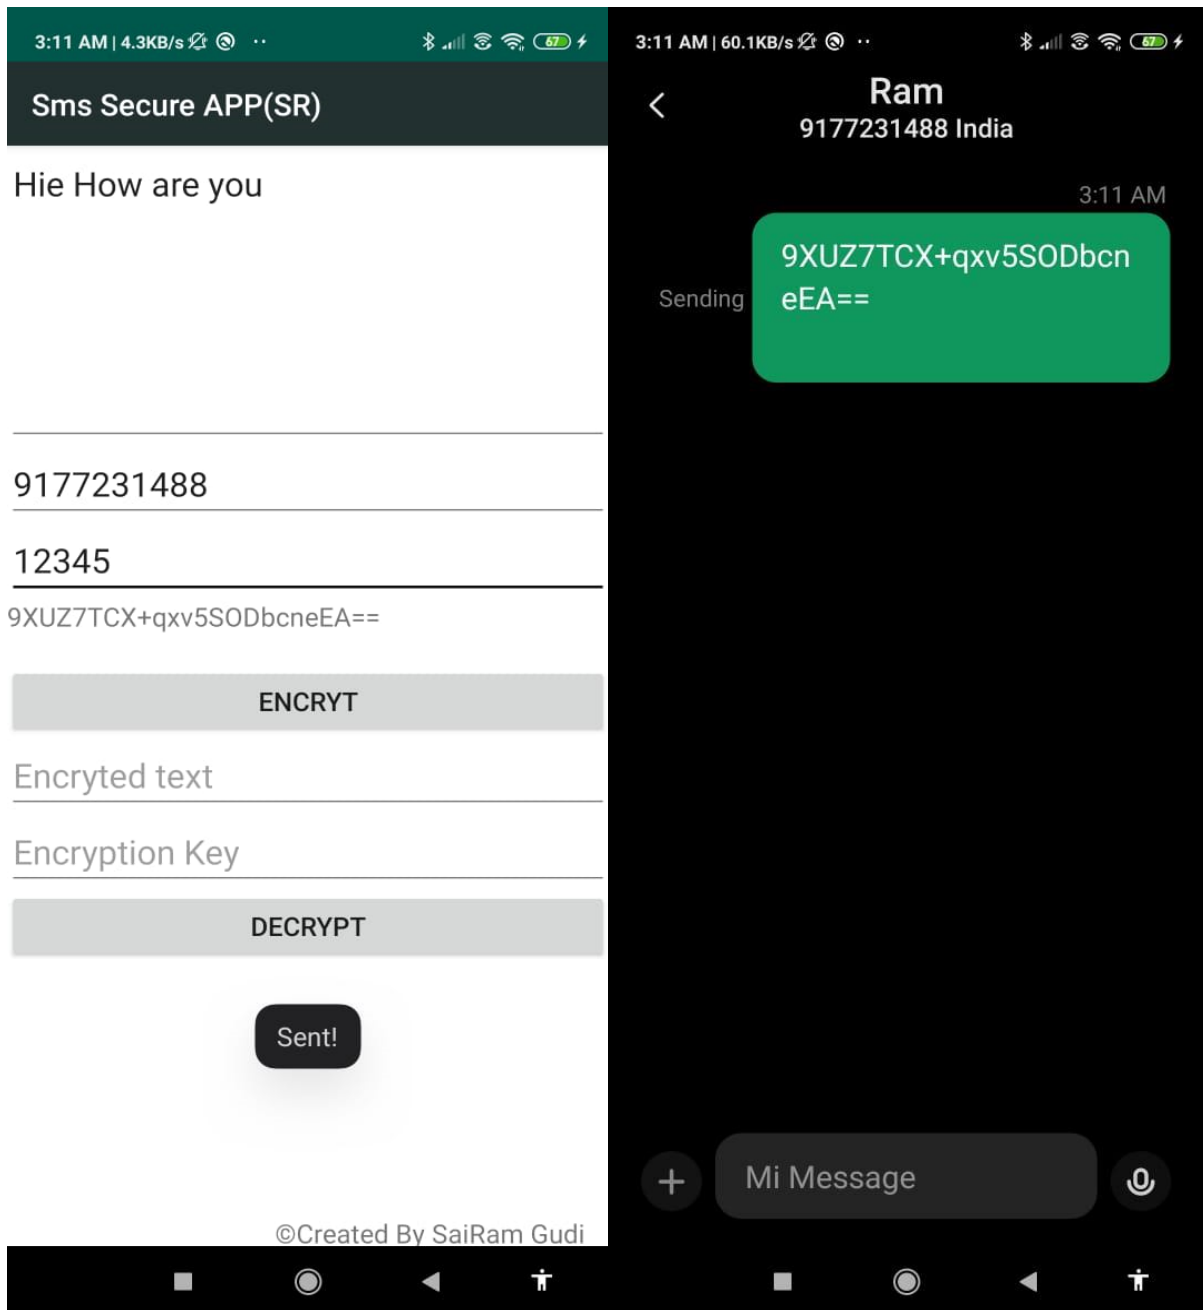

## Features:

- \* Encrypt: The user can use this feature to encrypt the message and send it to required person via SMS .
- \* Decrypt: The user is allowed to view the complete message which is decrypted as he selects the messages from the Inbox.
- \* Fast and Easy to use , No Internet Needed , It is highly reliable and secure.
